

# WANT YOUR AIR-CON TO SAVE MONEY AND THE ENVIRONMENT?

## LOOK FOR THE TICK

Refrigerant gases used in car air conditioning systems must be handled and disposed of safely and lawfully, by an ARCTick licensed technician.

If not handled correctly by a licensed technician, refrigerants released into the air can be harmful to human health and the environment.

Only ARCTick licensed technicians can safely and legally recover dangerous synthetic greenhouse gases from your vehicle's air conditioning system.

When your car's air conditioning system needs servicing and repair look for an ARCTick technician and licensed workshop.

They will recover the refrigerant without emissions to the atmosphere, and return the used or contaminated refrigerant for disposal.

**Be lawful, be safe and be part  
of the refrigerant transformation.**

**Your car and the environment, are  
worth it.**
